VOLUNTEERING

INTRODUCTION

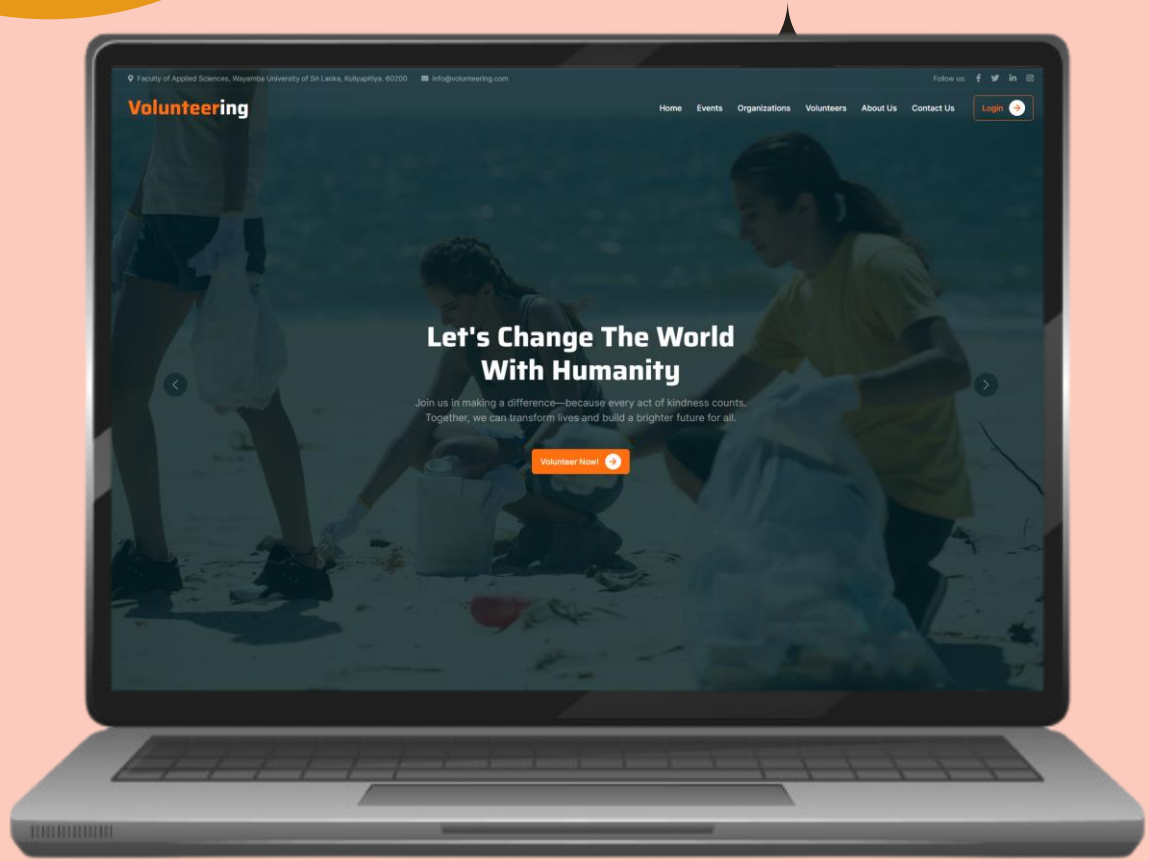
Volunteer Management System:

- It is a comprehensive digital solution designed to streamline and enhance the coordination of volunteer activities easily.
- It enables efficient recruitment, scheduling, communication, and tracking of volunteers, ensuring that their contributions are effectively aligned with volunteer event goals.

Identified Problems

- Ineffective communication between volunteers and organizations.
- Absence of historical records for volunteers.
- Challenges in matching volunteers with events and vice versa.
- Unreliable volunteer attendance.
- Low levels of volunteer engagement and motivation.

Solution



Faculty of Applied Sciences, Wayamba University of Sri Lanka, Kuliyapitiya, 60200

Join us in making a difference—because every act of kindness counts. Together, we can transform lives and build a brighter future for all.
Volunteer Now!

Solutions

- Develop a centralized communication platform to streamline and coordinate all interactions with volunteers.
- Implement a volunteer management system to keep a detailed database of volunteer profiles and their historical activities.
- Establish an online system for publishing and promoting volunteer events.
- Create a web-based administrative panel for organizational management.

Main Functionalities

- Capability for both volunteers and organizations to register and log in on the same platform.
- Ability to publish events and view them.
- Feature to access details of volunteers enrolled in an event.
- Functionality to manage entities such as volunteers and organizations.

Other Functionalities

- Event Management Capabilities
- Role-Based Authentication System
- Security and Privacy Measures
- System Performance
- System Reliability
- User Usability
- System Compatibility

Tools used

Visual Studio Code

XAMPP

Postman

Technologies used

HTML

CSS

JS

PHP

MySQL
